## IN THE CLAIMS

- 10. (currently amended) The apparatus according to any proceeding of claim 2, wherein the abutment means comprises a resilient member which is flexible out of the path of the device.
- 26. (currently amended) The apparatus according to any of Claims 22—to 25, further comprising a power source for the electrical, electronic or electro-mechanical means.
- 27. (currently amended) The apparatus according to any preceing of claim 1, further comprising a cover for an end of the discharge channel at the mouthpiece, the cover being movable between a position covering the discharge channel and a position for the discharge said dose, whereby to allow actuation of the mechanism.
- 35. (currently amended) The apparatus of claim 33—or 34, wherein the stop member comprises an elongate mounted member which is biased to engage the other rotatable means and a flap valve which is operable to allow air into a space between said opposed walls to equalise air pressure inside and outside the space and bias the elongate member to operate the cam or gear means.
- 36. (currently amended) The apparatus of according to any preceding claim 1, wherein the device is mounted under pressure resilient means.
- 38. (currently amended) The apparatus according to any preceding of claim 1, further comprising a damper means for damping movement of the device.
